

**Andrea Immendoerfer** is a researcher at Karlsruhe Institute of Technology (KIT) specializing in sustainability and energy in buildings. She has worked on a number of international projects concerning sustainable and energy efficient buildings (DEEP, PERFECTION, SuPerBuildings, CONCERTO Premium,). She has contributed to working group CEN TC 350 – WG4 - Sustainability of construction works - Assessment of buildings - Part 4: Framework for the assessment of economic performance. Previously, she has worked for the sustainable energy consultancy Camco Advisory Services in the United Kingdom for several years, undertaking BREEAM and Code for Sustainable Homes pre-assessments for a number of developments and working with local authorities to reduce their corporate carbon footprints. She also worked on the development and deployment of a UK-government approved software for producing Energy Performance Certificates for display in public buildings (EPLabel). Furthermore, she has taught as external tutor in the architecture department at Oxford Brookes University.
