

Tristan Oliver

Tristan leads the Greater London Authority's RE:FIT Technical Team which provides full support to public sector organisations throughout their energy and carbon conservation projects. The team helps clients get the most performance and value from their energy and carbon saving projects by providing advice, feedback, technical support and assistance with the RE:FIT Framework.

Tristan moved from construction to energy conservation four years ago when he started his own business in Aberdeen, providing commercial energy assessments and Energy Performance Certificates to clients in Scotland.

A decision by him and his wife to move to a warm climate last year led to his involvement in London's GLA RE:FIT Programme through consultancy work with Turner & Townsend.

Earlier in Tristan's career, he has worked in the southern UK as a site based Civil Engineer - and in New York City, Edinburgh, Glasgow and Aberdeen within Project Management - managing and involved in commercial, office, airport, hotel and MOD submarine facility projects.

Tristan's real drive is in helping organisations save energy and carbon.
